Senior Software Engineer – Full-Stack

Professional Summary

Senior full-stack software engineer with 12+ years of experience building and modernizing software platforms across healthcare, logistics, marketing technology, and SaaS, spanning startup and enterprise environments. Held senior engineering and frontend leadership roles, with deep expertise in Ruby on Rails, React, TypeScript, Node.js, PostgreSQL, API design, and background processing. Founder and lead engineer of TruthSeekAI, a deployed multi-service SaaS platform featuring secure private-document workflows, subscription billing, search, background jobs, and cloud infrastructure. Product-minded engineer who translates ambiguous business needs into reliable, maintainable systems.

Technical Skills

Languages & Frameworks: Ruby, Ruby on Rails, TypeScript, JavaScript, React, Node.js, Express, Python, Elixir, Phoenix, AngularJS
Data & APIs: PostgreSQL, MySQL, MongoDB, Redis, REST APIs, GraphQL, data modeling, schema design, external API integrations
Cloud & Platform: Google Cloud Run, Cloud Run Jobs, Supabase Auth/Postgres/Storage/RLS, Stripe, AWS, Docker, CI/CD
Testing & Delivery: RSpec, Jest, React Testing Library, Capybara, ExUnit, unit, integration, functional, and end-to-end testing
Product & Collaboration: SaaS architecture, background jobs, secure document processing, Agile/Scrum, Figma, Jira, Confluence

EXPERIENCE

Founder & Senior Software Engineer
TruthSeekAI — Remote | Jul 2024 – Present
Product: https://www.truthseekai.com | App: https://app.truthseekai.com

- Designed, built, and deployed a multi-service SaaS platform for transparent research triage and secure private-document analysis using React, TypeScript, Express, Python, PostgreSQL, Supabase, Stripe, and Google Cloud Run.
- Implemented authentication, private storage, row-level security, ownership checks, signed file access, and background PDF extraction and analysis through Cloud Run Jobs.
- Built a production subscription lifecycle covering Checkout, signed webhooks, idempotent event processing, cancellation, reactivation, resubscription, and entitlement synchronization.
- Developed open and private document search, persistent caching, saved libraries, detail views, comparison workflows, and explicit runtime validation at external boundaries.
- Owned the product end to end, including schema design, billing, security planning, deployment, operations, and user-facing design while preserving a path to private-cloud and on-premise deployment.

Freelance Full-Stack Developer
Calforce LLC and confidential client engagements — Remote | Ongoing contract

- Contracted with Calforce LLC to build and extend Rails applications for client operations and continuing-education webinar workflows.
- Delivered role-aware administrative workflows, scheduling, documents, payment flows, MediaMTX-backed webinars, evaluations, and certificates.
- Diagnosed frontend webinar failures and strengthened authorization, billing, private-communication, and browser-workflow coverage through focused integration and system tests.

Senior Software Engineer
MDLive/Cigna — Remote | Oct 2022 – Nov 2023

- Contributed to a Patient Care Plan microservice designed to support HIPAA and ADA requirements, using Ruby on Rails and React.
- Integrated third-party APIs supporting patient-provider health programs and enriched care-plan workflows.
- Developed React portal components and delivered backend features through test-driven development and production-quality review.

Senior Software Engineer
Stord — Remote | Feb 2019 – Apr 2021

- Contributed to modernizing a supply-chain logistics platform from a Rails monolith to a React and Phoenix application.
- Helped shape the Phoenix backend architecture and relational data model while maintaining and improving the legacy Rails platform during migration.

Lead Frontend Engineer
SmartBIM — Remote | Nov 2017 – Dec 2018

- Led frontend redevelopment of a BIM monetization platform from Rails to a greenfield React and Express application.
- Maintained feature parity during migration and established near-complete frontend unit-test coverage with Jest.

Senior Full-Stack Engineer
Springbot — Atlanta, GA | Feb 2016 – Jul 2017

- Designed and built a list-management system supporting complex inclusion and exclusion segmentation for email campaigns.
- Engineered CSV upload and download processing for hundreds of thousands of customer records per list.
- Delivered Rails and AngularJS features for the Social Hub Calendar and integrated AdRoll, Pinterest, and Facebook marketing services.
- Worked across PostgreSQL, MongoDB, Sidekiq background processing, and RSpec test suites.

Full-Stack Engineer
Tapjoy — Atlanta, GA | Apr 2014 – Dec 2015

- Built and maintained advertiser-dashboard features using Rails, JavaScript, React, and Backbone.
- Contributed to the design and implementation of Tapjoy's public API.

EDUCATION

Bachelor of Science in Computer Science
Georgia College & State University, Milledgeville, GA
